The NCO Journal received dozens of calls asking for copies when this article first appeared [Summer 93]. Because of its popularity, we are reprinting the article here in its entirety. Editor.

Training To MAX PT

By SGM (Ret) Robert S. Rush

Many soldiers can increase their physical fitness beyond their present level if they’re willing to concentrate on deficiencies instead of just trying to run faster.

The individual PT program revealed here was developed for soldiers with little time to devote to PT.

The program was validated using 40 students in an ROTC program. Students exercised three times per week for 20-25 minutes, not including the run. The following results were achieved: after one month, the average score for students increased by 15-20 points from an average of 192 to 212; at the end of three months, the students went from their average of 212 to 243; the second three months saw average scores climb to 267 with the low score 242 and the high score 300. Since this is an individual program, it is designed to fit each soldier’s physical ability. The program takes a soldier gradually to a higher level of physical fitness.

Take a look at your last APFT. From your scores you can determine where the starting point for your Individual Fitness Program should be. If you haven’t taken an APFT in the last three to four months, you may want to conduct an assessment of your physical abilities before beginning.

To conduct a self assessment, do as many correct push-ups and sit-ups as you can in a one-minute period, and then run as hard as you can for a timed one-half mile. Multiply your push-up and sit-up scores by 1.25 to find an entry point into the charts. Multiply your one-half mile time by four.

The Program

If done correctly, the program will bring you to muscle failure. This exercise regime is designed to be done every other day, as your muscles need from 24 to 48 hours to recover from hard usage.

To get your starting numbers, look at the charts. The numbers along the top of the charts are the number of pushups or sit-ups you performed. Follow the number down the row to give you the number of repetitions for each exercise you’re to begin with in your individual program.

Push-up, Sit-up Improvement

1. Regular push-ups times three sets with one-minute rest in between sets. Form is important. If you can’t do the push-ups properly, go to your knees and continue until you’ve finished the sets. After three workouts, add three push-ups to each set. Example: You start with 14 push-ups on Wednesday. The next Wednesday, go to 17 push-ups.

2. Regular sit-ups times three sets with one-minute rests between sets. If you can’t do all the sit-ups properly, lower the angle of your legs until they’re almost parallel to the ground. After three workouts, add three sit-ups to each set. Example: You start with 11 sit-ups on Wednesday. The next Wednesday, go to 14 sit-ups.

3. Close-hand push-ups. Put your hands together under your chest in a diamond shape. Perform the push-ups. Go to your knees if necessary. Add one close-hand push-up after every three workouts.

4. Wide arm push-ups. Place hands as far apart as possible. Perform the push-ups. Go to your knees if necessary. Add one wide arm push-up after every three workouts.

5. Crunches. See the separate chart.

6. Turn and bounce. Hold arms parallel to the ground with palms facing up. The exercise is an eight-count movement at a slow cadence. Pivot slowly at the waist to the right for four counts and then to the left for four counts. Add two

turn and bounces after every three work- 
outs.
7. Flutter kicks. Put your hands un- 
der your buttocks. Lift your feet six to 
eight inches off the ground to start. Begin 
by lifting legs in sequence to 18 
inches. Keep legs slightly bent to reduce 
the strain on your back. One repetition 
equals four counts. Add two flutter kicks 
after every three workouts.
8. Leg spreaders. Put your hands un- 
der your buttocks. Lift your feet six to 
eight inches off the ground to start. Begin 
by spreading legs 18-30 inches and 
then bringing them back together. Keep 
legs slightly bent to reduce the strain on 
your back. One repetition equals four 
counts. Add two leg spreaders after ev- 
ey three workouts.

Running

Use the running chart to increase 
your aerobic and anaerobic stamina and 
better your two-mile time. Enter the 
table using your two-mile time or multi- 
ply times four your half-mile assisment. For example, your run time is 
14:15. Enter the chart at +14. This pro- 
gram is designed to be run every other 
day, although there is no harm in run- 
ing more than three times a week.
Sprint day. Enter the sprint portion of the chart at your run time now. Do 
four sprints each of two distances, alter- 
nating your sprints between the dis- 
tances. Begin with the lower distance for 
your speed. Attempt to beat the time 
listed. Rest one minute before you run 
the longer sprint. Rest two minutes be- 
tween the longer and shorter sprints. If 
you feel you are not being properly 
stressed, and as you develop your wind, 
decrease the amount of rest time be- 
tween sprints. For those with run times of +17 to +19, when the 220-yard sprint 
goal is met, move up to the one-quarter 
mile (440 yards) and one-half mile (880 
yards) runs.

Fast run day. Begin with the lower 
distance for your speed. When you beat 
the time for the distance, move to a lon-
ger distance within the same row. When 
you surpass the time for the distance at 
the bottom of the row, move to the left 
one row, maintaining the same distance. When you move one row to the left on 
the fast run, move your sprint goals to 
the same row.

Long and slow run. Run at least 20 
minutes for a good cardiovascular workout. Run for time during this session, not 
necessarily distance.

The program is designed to have very 
little paper overhead. Each soldier is 
responsible for his or her own pace in 
the program, which has the additional 
benefit of exercising the soldier's self disci- 
pline.

One technique to start the program 
would be to give each soldier a packet 
and have the program explained after an 
APFT or diagnostic test. Organized PT 
would still be conducted, but with each 
soldier doing the amount of exercises 
determined by his or her specific pro- 
gram. As a check, periodic diagnostic 
tests could be used to review progress.

As with any program, results are di-
rectly attributed to the amount of effort 
estended. Soldiers who can't keep up on 
the battlefield are losses just as much as 
losses suffered through enemy ac-
tion. We, as NCOs, are charged with not 
letting this happen.

Rush was the Army advisor to the 26th In-
fantry Division, Camp Edward, ME, 
when this article was written.
